📄 PROFILE

Results-driven Software Developer and BCA graduate (CGPA: 8.6) with hands-on experience across 4 internships and 8+ scalable projects. I specialize in building production-ready MERN applications and advanced Agentic AI workflows using LangChain and LangGraph. With 4 international research publications—including a Best Paper Award—and expertise in deploying FastAPI services on AWS, I bridge the gap between academic excellence and real-world engineering. Committed to architecting clean, user-centric solutions that leverage data analytics and AI to drive measurable impact.

📁 PROFESSIONAL EXPERIENCE

- Agentic AI & Data Science (GenAI) Intern**, Innomatics Research Labs

11/2025 – 05/2026
Remote

 - Developed a stateful customer support assistant using LangGraph to manage complex decision-making nodes, conditional routing, and managed query lifecycles.
 - Engineered a localized RAG pipeline utilizing ChromaDB for vector storage and recursive character splitting to ensure document-grounded, factually accurate responses.
 - Implemented Human-in-the-Loop (HITL) safety gates to identify knowledge-gap or low-confidence queries and route them to human agents with explicit reasoning.
 - Optimized multi-model inference by integrating Groq for low-latency generation with a Gemini fallback strategy and full execution transparency via LangSmith.
- Tech Intern**, Anishk Sustainable Development Foundation (ASDF)

04/2024 – 04/2025
Remote

 - Collaborated with a team to develop the "Arka Journal" website, focusing on research and publications related to rural and tribal community initiatives.
 - Utilized HTML, CSS, JavaScript, and PHP to build a responsive, user-friendly website for showcasing research papers and publications.
 - Worked closely with developers, designers, and researchers to integrate research content seamlessly into the website.
 - Enhanced the accessibility and visibility of community-driven research by creating a digital platform for sharing knowledge and innovations.
- Full Stack Development Intern**, Innomatics Research Labs

01/2025 – 03/2025
Remote

 - Developed dynamic, component-based UIs using React.js and implemented secure server-side logic with Node.js and Express.js for real-world web applications.
 - Designed and optimized MongoDB schemas and queries for efficient data modeling, directly improving application performance and reliability.
 - Delivered LumbiniCare Connect as the capstone project — a full-stack hospital management system with JWT-based role access, RESTful APIs, and a responsive Material-UI frontend.
 - Applied full-stack best practices end-to-end: from UI component architecture and API design to database integration and deployment.
- Full Stack Development Intern**, Pantech Prolabs India Pvt Ltd

07/2024 – 01/2025
Remote

 - Gained hands-on experience building full-stack web applications using the MERN stack — developing React.js interfaces, Node.js/Express.js APIs, and MongoDB databases from the ground up.
 - Debugged, tested, and optimized code across frontend and backend layers, developing a strong foundation in scalable application development.
 - Applied software development best practices including component architecture, RESTful API design, and Git version control in a structured, real-world environment.

📁 PROJECTS

- SkillNexus - Learn from Humans (College Final Year Project)**,
Using React, Vite, React Router (HashRouter), Axios, Node.js, Express, MongoDB, Mongoose, JWT, CSS utility classes
- Built a peer-to-peer learning marketplace where people learn directly from humans (not prerecorded videos), with mobile- first UI, width-safe layouts.
 - Engineered a unified friendship + notification lifecycle with request/accept/reject/cancel endpoints, auto-delete pending notifications on cancel, single-item status that persists across refresh, relation-based syncing, duplicate suppression, and event-driven/visibility refresh.
 - Implemented secure, reliable platform foundations using JWT auth, protected admin areas with token validation, Mongoose data models, scrollable one-line filters for clean discovery, consistent purple brand styling, accessible contrast, and larger tap targets.
 - Delivered end-to-end performance and quality with removed noisy SSE 404s, optimized axios base/proxy, added toasts and disabled buttons during network calls, ran lint/QA across routes, and verified production behavior post-deploy.

AlgoCare - Reducing the Wait, Prioritizing the Life (Hackathon Project),

Using React, Vite, Node.js (ESM), Express, Socket.io, MongoDB, Tailwind/MUI

- Developed an intelligent hospital resource and queue management SaaS for Track 3 of HackGenX 2026, delivering tailored dashboards for Patients, Doctors, and Administrators.
- Engineered a self-correcting queue engine using a Moving Average Algorithm that calculates high-precision patient ETAs based on the actual completion speed of the last five consultations.
- Implemented zero-latency real-time synchronization using Socket.io, enabling instant cross-dashboard updates for token status, bed availability, and resource levels without page refreshes.
- Built a secure, modular foundation using a Controller-Service-Repository pattern with JWT-based role-based access control (RBAC) and automated history linking via email-based patient identification.

Source code [↗](#)

Emotion-Based Mental Health Tracker,

Using React, TypeScript, Vite, Material-UI, Recharts, JWT, localStorage (simulated DB), Tailwind CSS

- Emotion-first risk assessment with automatic webcam emotion analysis on login, 8-question survey, instant personalized risk score and recommendations.
- Closed-loop improvement workflow with camera-monitored guided activities, 5-question emotion retest, quantified pre/ post improvement and visual comparisons.
- Iterative personalized recommendations via dynamic re-assessment loop delivering targeted interventions and next-step guidance to reduce user risk.
- Secure analytics-backed platform with role-based authentication, protected admin dashboard, persistent localStorage data and exportable real-time dashboards.

LumbiniCare Connect: Lumbini Nepal Hospital, Using MERN Stack (MongoDB, Express.js, React.js, Node.js) Source Code

- Built a full-stack hospital management system enabling efficient management of appointments, prescriptions, and departments.
- Implemented secure authentication and role-based access control (RBAC) using JWT for data privacy and restricted access.
- Designed scalable RESTful APIs for CRUD operations with robust error handling and MongoDB integration.
- Enhanced user experience with a responsive React.js frontend and Material-UI for a mobile-friendly interface.

 SKILLS

Full Stack Development — MERN Stack (MongoDB, Express.js, React.js, Node.js), REST APIs, JWT, Socket.io, MVC / Controller-Service-Repository

Web Technologies & UI — HTML5, CSS3, Tailwind CSS, Material-UI, Vite, Responsive Design, Accessibility (a11y)

Data Analytics & Power BI: — Power BI, Pandas, NumPy, Matplotlib, Data Visualization, Microsoft Excel

AI / GenAI — Agentic AI, LangChain, CrewAI, RAG, Prompt Engineering, Generative AI, LLM Integration (GPT-4, Claude API)

Programming Languages — JavaScript (ES6+), TypeScript, Python, Java, SQL, C, C++

Databases — MongoDB, MySQL, Mongoose ODM, RESTful API Design, CRUD, Indexing

Tools & Platforms — Git, GitHub, Postman, VS Code, Agile/Scrum, Microsoft Office Suite

Soft Skills — Leadership, Cross-functional Collaboration, Problem Solving, Rapid Prototyping, Public Speaking, Leadership, Communication

 EDUCATION

Bachelor of Computer Applications (BCA) (CGPA: 8.6), Sandip University 07/2023 – 06/2026
Nashik, Maharashtra, India

 RESEARCH PAPER

(ICETDA 2025), 3rd International Conference on Emerging Trends of Design & Arts at 01/08/2025
Poornima University
Jaipur, Rajasthan

(FINCON 2025), International Financial Security and Management Conference-2025 at 01/07/2025
National Forensic Sciences University
Gandhinagar, Gujarat

International Conference on Advances in Computational Intelligence and Applications-2025 01/10/2025
at Insitute of Information Technology & Management(IITM), GGS Indraprastha University
New Delhi

IEEE Conferences- ARRIA 2024 at Manipal Institute of Technology 01/11/2024
Manipal, Karnataka
